ENDURING IMAGES OFFERS ALTERNATIVE DESIGN OPTIONS

Enduring Images partners with Evergreen Glass to offer new glass technologies and design options for home upgrades.

DENVER, Colorado, February 8, 2008 — With the housing market in distress, homeowners are looking for alternative ways to upgrade their current living space instead of buying a new house. Often the first place they start is the kitchen or bathroom, transforming a kitchen backsplash into a sweeping Tuscan landscape or bring a shower door to life with a stand of aspen trees.

Enduring Images has been providing these artful touches to give new and existing spaces the wow factor. Their custom LASER etchings on tile, leather, granite and glass have been a hit with customers who want to make a one-of-a-kind design statement.

Until recently the company was limited to etching designs on clear glass. New technology and a recent partnership with Evergreen Glass now allows them to etch the same level of resolution on colored glass. The GlassKote process uses a revolutionary agent that is mixed with color compounds to create a durable, colorfast finish on glass. The combined technologies of LASER etching from Enduring Images and GlassKote colored glass from Evergreen Glass offer an exciting alternative material for custom-designed backsplashes, counter tops, shower doors and accent windows.

“Designers and architects will be excited about this sensational new material. It has few boundaries of application or design. Enduring Images can take their

vision even further by custom-etching virtually any design on this surface,” said Mary Beth Manwiller, CEO of Enduring Images. “Our teaming with Evergreen Glass gives homeowners access to a wide variety of custom upgrades that will make a stunning addition to any home.”

The etched images are photo-quality 300 dpi, a much higher resolution than traditional sand blasting techniques.

Enduring Images also holds exclusive United States rights to a patented digital process for printing on ceramics. Using this technology, Enduring Images can create custom, coordinated dinnerware and tile for clients, perhaps matching a fabric swatch or reproducing a favorite painting. Because the process is so simple to set up, even small quantities of custom ceramics can be produced at reasonable cost.

Since 2003 Enduring Images has been a leader in digital and ceramic imaging for commercial and residential clients. A showcase of images and applications can be seen at Evergreen Glass, 29340 Industrial Way in Evergreen.
